EXPERIMENT-2

REG NO-240701164. NAME-HARI KRISHNAN EP

USER INTERFACE DESIGN

Design a UI where users recall visual elements (e.g., icons or text chunks). Evaluate the effect of chunking on user memory.

Image 1: Instructions Screen (Memory Recall Test – Introduction)

Purpose:
This screen introduces the user to the memory recall test and explains how the test works.

Description:

- The title **"MEMORY RECALL TEST"** is displayed prominently at the top in bold red color.
- Step-by-step instructions are provided:
    1. Users are shown several pictures.
    2. They must carefully observe each picture.
    3. They should try to memorize the pictures.
    4. After viewing, they must recall what they remember.
    5. Accuracy is emphasized over speed.
- A **START** button is placed at the bottom to begin the test.
- The background color is light blue, giving a calm and readable interface.

Functionality:
Guides the user before starting the memory test.

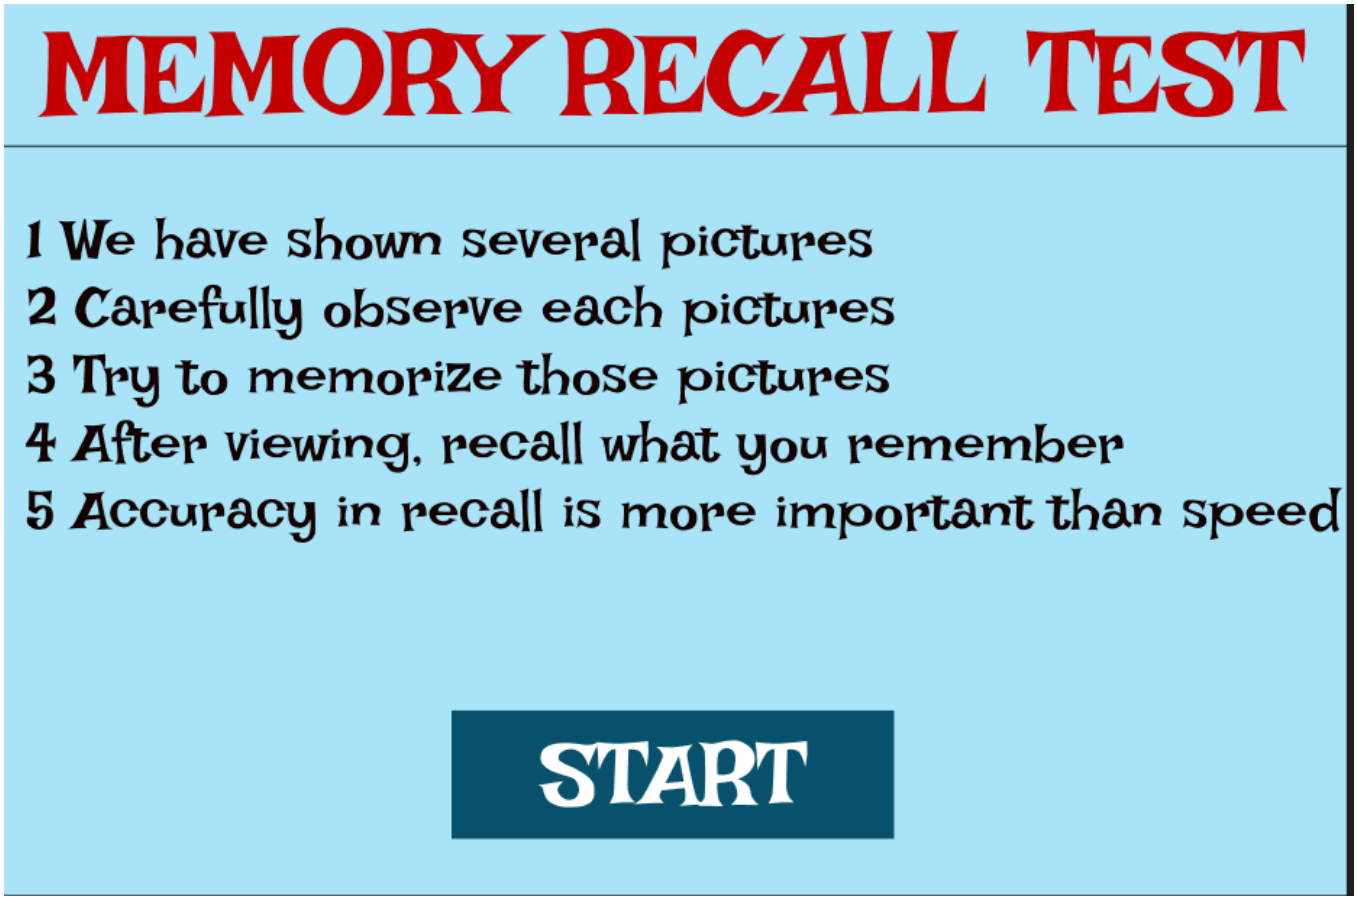

Image 2: Memorization Screen

Purpose:
This screen allows users to **view and memorize items** within a fixed time.

Description:

- The heading **"MEMORY RECALL TEST"** appears at the top.
- A message **"Memorize the items!"** is shown to alert the user.
- A countdown timer (**20 seconds**) is displayed to limit memorization time.
- Multiple objects/icons are shown, such as:
  - Shoe, star, slipper
  - Camera, lock, printer
  - Emojis, music symbol, settings icon, etc.
- Items are arranged in a grid layout for clarity.
- A **START** button is shown to proceed after memorization.

Functionality:
Tests the user's short-term memory by showing multiple items briefly.

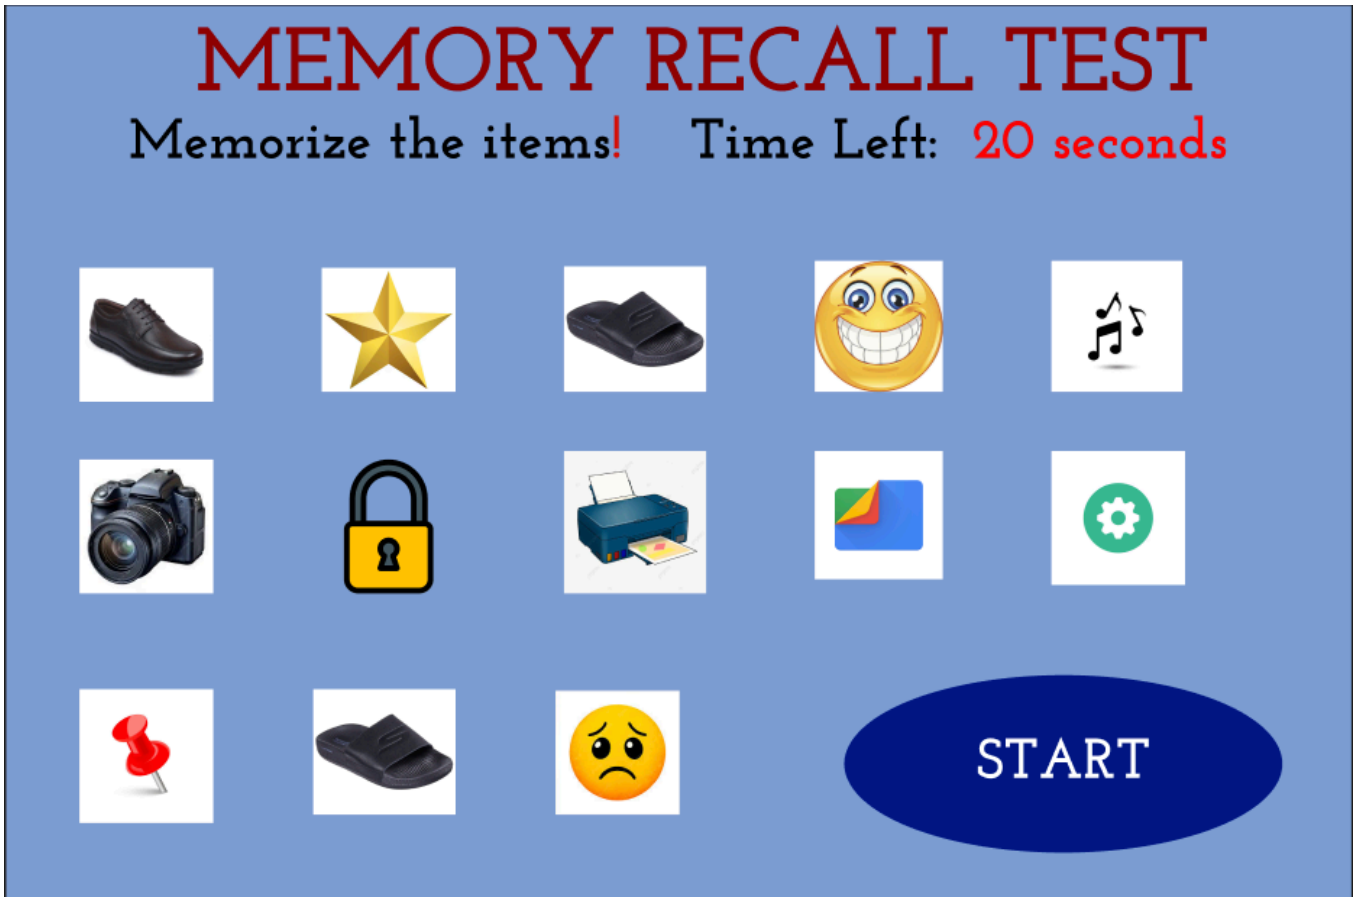

Image 3: Recall / Selection Screen

Purpose:
This screen tests how well the user recalls the previously shown items.

Description:

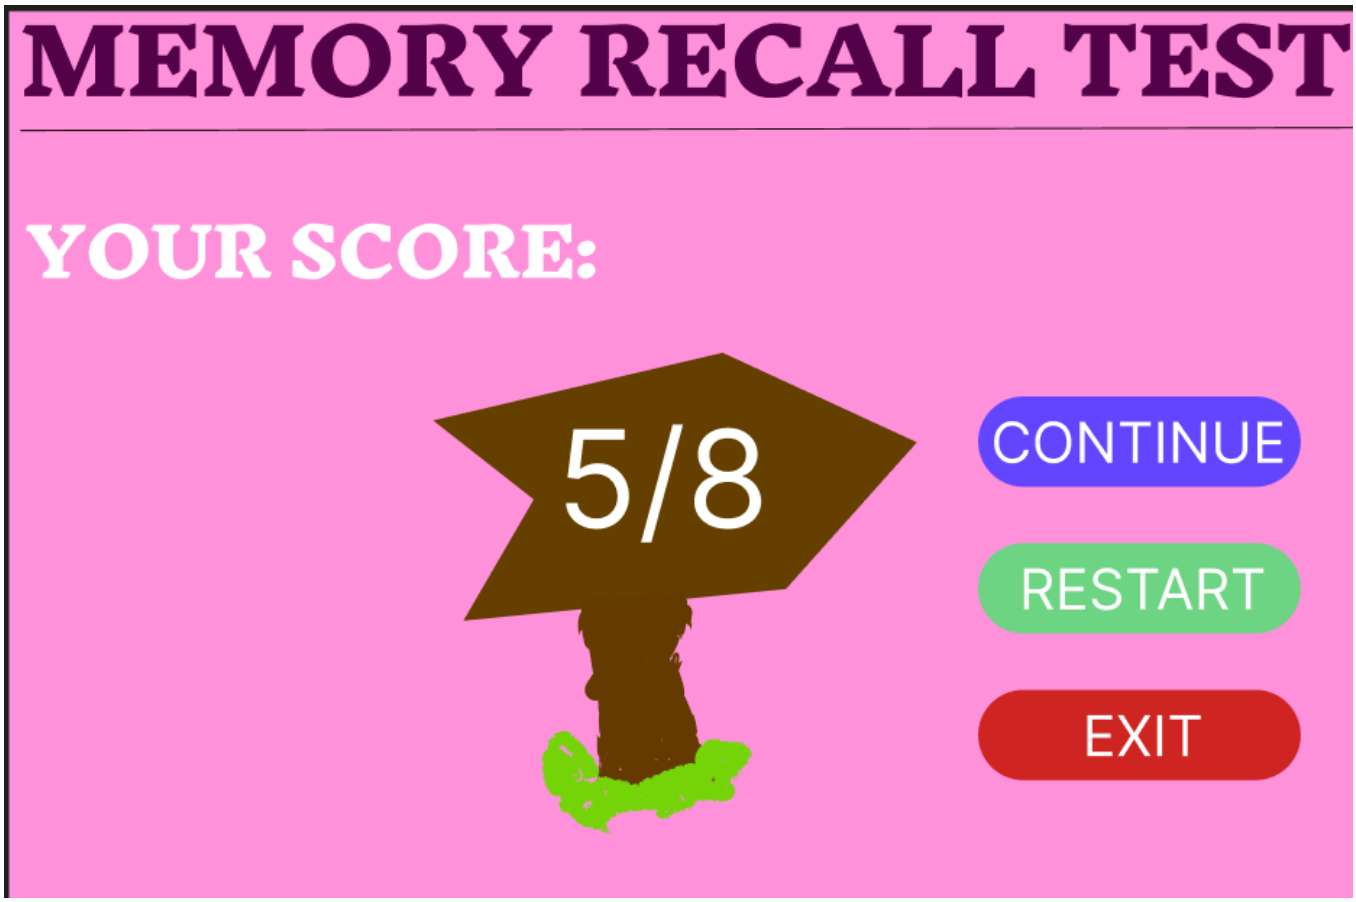
- The heading says **"Click the item that you recall"**.
- A countdown timer (**5 seconds**) is displayed to increase difficulty.
- Several images are shown:
    - Some images were shown earlier (correct answers).
    - Some images are new (distractors).
- Users must click only the items they remember seeing.
- Dark dots indicate selectable options.
- An **END** button is provided to finish the recall phase.

Functionality:
Evaluates the user's memory accuracy under time pressure.

Image 4: Result / Score Screen

Purpose:
This screen displays the user's performance in the memory test.

Description:

- The title **"MEMORY RECALL TEST"** is displayed at the top.
- The text **"YOUR SCORE:"** is shown clearly.
- The score is displayed as **5/8**, indicating correct recalls.
- Visual elements (tree/graphic) are used to make the result screen attractive.
- Three buttons are provided:
  - **CONTINUE** – to proceed further
  - **RESTART** – to retake the test
  - **EXIT** – to leave the application
- Background color is pink, making the result screen distinct.


Functionality:
Shows performance feedback and allows user navigation.
